The Helena

New York, NY

The Helena is a 37-story residential building along the riverfront block at the western end of West 57th Street at 11th Avenue. The green building will use high performance technologies such as gray water, central heating and cooling systems and green roofing are integrated.

Mueser Rutledge Consulting Engineers (MRCE) services included series of subsurface investigations, foundation and construction recommendations in a report, and inspection services during the construction phase.

The Helena was completed in 2004.
